

**S**mart Electronics is synonymous to High Quality electronics since 1980. The company is well known to generations of professional, educational, and hobby enthusiasts all around the world.

There are thousands of people who learned electronics using our kits and today are electronic engineers and well known professionals. From Island to S. Africa and from USA to Hong Kong, Smart Kits are exported in many countries and they are famous for their quality and well known as best value for money products.

During last year we worked very hard to improve our range. We created new kits -some of them using of microcontrollers- and we redesigned some others. The majority of the kits now have the CE approval and its a matter of time to get the approval for all the rest.

We also paid the proper attention to offer you the right information. In our site at Internet [www.smartkit.gr](http://www.smartkit.gr) you will find all the info about Smart Kits in English, German, Dutch, Danish, Swedish, Italian, Spanish, Portuguese, French, Hungarian and Greek. The most of the kits have already multilingual instructions in 8 languages. This catalogue is also among our efforts to provide you the info that you require to make the right selection. Try a Smart Kit!

## WHAT IS A SMART KIT?

It is an easy way to build an electronic device such as: A.F. amplifiers, F.M. transmitters, alarms, power supplies, instruments, light modulators bugging devices etc. Apart from that, there is a great fun in building electronic circuits, you can also feel very proud for your creativity and of course you have a chance to learn a lot!

Furthermore you can save a lot of money because kits cost less than assembled devices.

A Smart Kit pack contains everything that you need to build the circuit. All the components, printed circuit boards and instructions -usually in your language- are included in the package. All you need is, just a soldering iron!
